

A REPORT ON THE THIRD PHASE OF 2008 **PROJECT PROFILE AT LARABANGA**

The on going project of 2008 at Larabanga is still under way. This money is raised to renovate a three classroom blocks. As The community keep growing we need to have enough classrooms for the pupils to stay and learn. As part of the community contribution they decided to renovate the old building while the funds that has been raised by Mr. Robert Christine should be used to start new classroom building.

We have received GH¢3,486. New Ghana cedis from Robert Danziger for the project. And while the project is about to start. Community also agreed to undergo comunual labour that will help grow the project. Community also agreed to renovate the old three classroom block in addition. The funds is used as follows:

100 bags of cement has been bought for 3400 blocks which cost GH1200.

10 trips of sand which cost GH900.

3 trips of stones for the foundation which cost GH360.

Iron Rods GH450.

GH500 is also used to pay for constructions that is those who do the building it self.

Community women contribute water for the project. The men also work in other parts to support the project. The old building is also bee renovating by the community. I therefore include photos for the project that done so far. The photos covered what the money is able to do.

We would be glad if could have another funds that would help complete the building. We hope to finish it as soon as another funds has been raised. The community is always ready for any support that will come to help them develop. The community is so much keen in education because it helps the children and that education is development. The school is now populated to 1020

pupils. When this building is finish, it will be a great help for us in the community.

We say thank you to all donors and supporters of this project.

Yours faithfully

.....
Seidu A. Abusco
